

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR LANDED COST REPORTING IN A SUPPLY CHAIN MANAGEMENT FRAMEWORK

5

ABSTRACT

A system, method and computer program product are disclosed for cost reporting using a network-based supply chain management framework. Data is received utilizing a network. This data relates to goods required by a plurality of stores including a product identifier parameter, and a first cost parameter. A second cost parameter associated with a franchise mark-up is also received so that a total cost can be calculated based on the first cost parameter and the second cost parameter. The total cost is displayed utilizing the network with TCP/IP protocol.
